User Story

The EventForce Management System is a Salesforce-based event management solution for event creation, participant registration, scheduling, venue coordination, task assignment, notifications and event status tracking. Salesforce Flow automates backend processes and Agentforce provides conversational event support.

1. INTRODUCTION

1.1 Project Overview

Event organizers often manage event details, registrations, schedules, venues, volunteers and communication through separate tools or manual processes. EventForce centralizes the event lifecycle in Salesforce, from creation and registration to coordination, attendance and completion.

1.2 Purpose

- Create and manage events centrally.
- Allow participants to register for events.
- Maintain schedules, venues, capacity and status.
- Automate registration and event tasks using Flow.
- Provide clear participant and event information.
- Use Agentforce for conversational event support.
- Reduce repetitive coordination work.

2. IDEATION PHASE

2.1 Problem Statement

Persona	I'm trying to	But	Which makes me feel
Event Organizer	manage events and registrations	information is spread across manual records	overwhelmed
Participant	find and register for events	availability may be unclear	confused
Coordinator	coordinate venue, schedule and tasks	updates need repeated communication	concerned
Organizer	track registrations and capacity	manual checking causes delays	uncertain
Staff	know assigned tasks	assignment is not centralized	frustrated

2.2 Empathy Map Canvas

User Persona: Event Organizer

- **Think & Feel:** Wants event details and participant updates in one place.
- **Hear:** Receives participant requests and coordination updates.
- **See:** Event details, venue, date, capacity, registrations, tasks and status.
- **Say & Do:** Creates events, monitors registrations, assigns tasks and coordinates staff.
- **Pain:** Manual tracking, scattered updates and scheduling conflicts.
- **Gain:** Centralized records, automated workflows and faster coordination.

2.3 Brainstorming

The team considered different approaches for event creation, registration, scheduling, coordination and participant communication. The selected solution is a Salesforce CRM-based EventForce system integrated with Flow automation and Agentforce.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey

Event Creation → Publishing → Participant Discovery → Registration → Capacity Validation → Confirmation → Schedule & Venue Coordination → Task Assignment → Attendance → Completion

3.2 Solution Requirements

FR No	Requirement
FR-1	Event creation and management
FR-2	Venue and schedule management
FR-3	Participant registration
FR-4	Event capacity validation
FR-5	Registration confirmation
FR-6	Organizer/staff task assignment
FR-7	Attendance/status tracking
FR-8	Agentforce conversational event information
NFR	**Description**
Usability	Clear event information and simple registration
Reliability	Consistent registration and capacity handling
Performance	Quick retrieval of event information
Security	Controlled Salesforce access
Maintainability	Flow and Agentforce can be updated
Scalability	Supports increasing event and participant volumes

3.3 Data Flow Diagram

Organizer / Participant Flow: Organizer / Participant → Event → Schedule & Venue → Registration → Capacity Check → Confirmation → Task / Attendance → Event Completion

Agentforce Flow: Event request → EventForce Agent → Event data retrieval → Registration/status information → Response.

3.4 Technology Stack

Layer	Technology
Platform	Salesforce
Database	EventForce custom objects: Event, Participant, Registration, Venue and Task
Logic	Auto-Launched / Record-Triggered Flow
AI	Agentforce
Automation	Flow Decision, Assignment, Create/Update Records
Output	Agentforce conversational response

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

Problem	Solution	Benefit
Manual event management	Centralized Salesforce records	Better organization
Manual registration	Automated registration records	Reduced effort
Capacity may be exceeded	Flow capacity check	Controlled registration
Schedule unclear	Centralized date/time/venue	Better coordination
Manual task assignment	Flow creates/assigns tasks	Faster execution
Users need quick answers	Agentforce support	Better experience

4.2 Proposed Solution

Parameter	Description
Problem	Scattered event information and manual coordination
Solution	Salesforce-based EventForce Management System
Innovation	Salesforce Flow + Agentforce
Impact	Faster coordination and better registration visibility
Business Model	Organizers, participants, coordinators and staff
Scalability	Supports additional events, participants, venues and workflows

4.3 Solution Architecture

Users → Agentforce / Salesforce → EventForce Data → Capacity Decision → Flow Automation → Tasks / Confirmation → Event Status → Final Response

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Agile methodology
- Epics → Stories → Story Points
- Sprint-based execution
- Velocity calculation used for estimation

Sprint	Epic	User Story	Team Member	Points	Priority
Sprint-1	Developer Setup	Configure Salesforce for EventForce	Yokesh. M	3	High
Sprint-2	Data Modeling	Create EventForce objects and fields	Madhubalan. G	5	High
Sprint-2	Registration	Register for an available event	Rammohan. S	5	High
Sprint-3	Automation	Validate capacity and automate registration	Vignesh. V	5	High
Sprint-4	Agentforce	Provide event details conversationally	Yokesh. M	8	High
Sprint-4	Task Coordination	Create and assign event tasks	Madhubalan. G	5	High
Sprint-5	Attendance	Track attendance and completion	Rammohan. S	5	Medium
Sprint-6	Testing	Validate automation and Agentforce	Vignesh. V	5	Medium

6. PROJECT DEVELOPMENT PHASE

Milestone 1: Salesforce Account

Create and activate a Salesforce developer account using the required signup and verification steps.

Milestone 2: Data Management-Objects

Custom Object

Object Name: EventForce Event

API Name: EventForce_Event__c

Field Label	API Name	Data Type	Description
Event Name	Event_Name__c	Text	Name of event
Event Number	Event_Number__c	Auto Number	Unique identifier
Description	Description__c	Long Text Area	Event details
Event Date	Event_Date__c	Date	Scheduled date
Start Time	Start_Time__c	Time	Start time
Venue	Venue__c	Lookup/Text	Event location
Capacity	Capacity__c	Number	Maximum participants
Registered Count	Registered_Count__c	Number	Current registrations
Status	Status__c	Picklist	Draft, Open, Full, Completed, Cancelled

Auto-Launched Flow Logic (Modified for this Project)

1. Flow Type

Auto-Launched Flow (called from Agentforce or Salesforce automation).

2. Variables

Label	API Name	Type	I/O
Event Name	varEventName	Text	Input
Event Id	varEventId	Text	Output
Available Capacity	varAvailableCapacity	Number	Output
Registration Status	varRegistrationStatus	Text	Output
Action Message	varActionMessage	Text	Output

3. Step-by-Step Flow Implementation

- **Get Event** — retrieve EventForce Event using Event Name.
- **Store Event Id** — save the retrieved event identifier.
- **Calculate Availability** — compare Capacity and Registered Count.
- **Decision** — route to Available or Full path.
- **Registration Handling** — create registration and update count when available.
- **Confirmation** — set registration status and message.
- **Full Event** — return unavailable message when capacity is reached.
- **Final Output** — return event ID, availability, status and action message.

4. Final Flow Structure

Start → Get Event → Store Event Id → Check Capacity → Available / Full Decision → Create Registration & Update Count → Set Message → End

5. Flow Output

The flow retrieves the event, checks capacity, handles registration when possible, updates registration information and returns a clear status message.

Agentforce Configuration

Steps

- Enable Agentforce features available in the Salesforce environment.
- Open Agentforce Builder.
- Create the EventForce subagent/topic.
- Connect the required Salesforce Flow action.

Agentforce Subagent Configuration

Name: EventForce Event Assistant

API Name: EventForce_Event_Assistant

Classification Description: Provides event information, registration status, availability, schedule, venue and basic coordination support.

Scope: Analyze EventForce requests, retrieve event information, assist with registration status and trigger configured backend Flow.

Instructions

- Ask for Event Name if needed.
- Retrieve the event record.
- Read date, time, venue, capacity, registration and status.
- Check registration availability.
- Trigger Flow when registration is requested and available.
- Return a clear confirmation or availability message.
- Use Flow for record actions.

Agent Action Description

Provides event information and uses EventForce Flow for registration and capacity-related actions.

Input

varEventName — Event name used to retrieve details.

Outputs

Output	Description
varEventId	Unique event identifier
varAvailableCapacity	Available participant capacity
varRegistrationStatus	Registration result/status
varActionMessage	Final event or registration message

7. FUNCTIONAL & PERFORMANCE TESTING

The Salesforce implementation should be validated to ensure EventForce correctly retrieves events, checks capacity, handles registrations, updates event information and returns the expected Agentforce response.

Test Case	Expected Output	Result
Event Retrieval	Correct event details retrieved	Pass
Capacity Check	Available/full status identified	Pass
Registration	Available event creates registration and confirmation	Pass
Full Event	New registration prevented when full	Pass
Agentforce & Flow	Agentforce invokes backend Flow	Pass
Event Status	Status displayed correctly	Pass

Test Case 1: Event Retrieval

Expected: Requested event details are retrieved. **Actual:** Configured retrieval returns event information. **Result:** Pass

Test Case 2: Registration and Capacity

Expected: Registration allowed when capacity is available and rejected when full. **Actual:** Capacity decision follows configured path. **Result:** Pass

Test Case 3: Agentforce and Flow Integration

Expected: Agentforce accepts event request, invokes Flow and returns status. **Actual:** Configured action returns EventForce outcome. **Result:** Pass

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized Event Management
- Automated Registration
- Capacity Control
- Faster Coordination
- Task Automation
- Conversational Support
- Improved Visibility
- Scalable Operations

Disadvantages

- Depends on accurate event and participant data.
- Flow configuration must be maintained when rules change.
- Agentforce depends on correct configuration.
- Advanced analytics may require additional development.
- Complex schedule conflict detection requires additional configuration.
- Large-scale operations may need additional integrations.

9. Conclusion

The EventForce Management System demonstrates how Salesforce, Flow automation and Agentforce can work together to centralize event operations. The solution supports event creation, participant registration, capacity handling, scheduling and venue information, task coordination, status tracking and conversational access to event details. By reducing repetitive manual work and improving visibility, EventForce can support organized and efficient event management.

10. FUTURE SCOPE

- Advanced event analytics and registration dashboards.
- Automated reminders and notifications.
- QR-based attendance/check-in.
- Waitlists for full events.
- Venue and schedule conflict detection.
- Richer Agentforce assistance.
- Payment or external registration integration.
- Post-event feedback and evaluation.

11. APPENDIX

- **A. Custom Object:** EventForce Event
- **B. Key Salesforce Records:** Event, Participant, Registration, Venue, Task
- **C. Flow:** EventForce Registration & Capacity Flow
- **D. Agentforce Subagent:** EventForce Event Assistant
- **E. Agentforce Action:** Flow-based EventForce registration/status action

Thank You
